1. Overview

OH-735 comes with double system capacity by either 4x4 MIMO or Carrier Aggregation; providing increased data rate, downlink up to 300 Mbps.

4x4 MIMO technology transmits 4 signal streams at the same time, using 4 antenna, over the same frequency. For operator who has limited spectrum, it helps make the most of spectral efficiency (bps/ MHz) and improve data capacity as well.

A high quality patch antenna is integrated inside to ensure stable connectivity and extended coverage. Peak gain can reach 16 dBi if it is pure 3.4~3.8GHz model.

OH-735 is compliant with IP-66 (Ingress Protection ratings), and its operating temperature is from -30 to +55 degree C. All those factors contribute to a rugged yet cost-effective solution to operate in extreme weather condition.
